

# Strap Extenders

Strap extenders make it easier to reach a single lifting point by extending the length of the webbing loops.

5 Ft.

- **Five-foot extensions** increase the Snow Shield strap length to just over 6', allowing you to reach a single lift point with ease.
- **Easy to use** by creating a slipknot with the Snow Shield's corner loops and simply hooking to a crane's vertical hitch.
- **Reinforced, double-layered loops** allow for high strength as well as good abrasion resistance.
- **Removable straps** can be quickly transferred from one Snow Shield to another allowing you to get repeated use out of one set.

- **Large loops** make it easier to handle and detach even when the straps are frozen.
- **Ultra-strength webbing** means that a set of extender straps will match the existing weight rating of our Snow Shields so you can lift them with confidence.
- **Set of four** (4) strap extenders are included with each package.
